

AI-Era Agile Readiness Assessment

A 90-minute working session that tells you exactly where your delivery process breaks down when AI enters the room.

THE PROBLEM

Your team adopted AI dev tools. Your Agile process didn't.

AI-assisted development tools can scaffold a working feature in hours. But if your Definition of Done still measures construction effort, your sprint planning still estimates story points, and your QA still sits downstream of development — you are optimizing for a bottleneck that no longer exists.

The result: teams shipping AI-generated code faster than their hardening process can handle. Velocity goes up. So does production risk.

WHAT YOU GET

A clear picture of your readiness gap — in 90 minutes.

Ceremony Audit

We evaluate your current sprint planning, Definition of Done, standup, review, and retrospective against the AI-era Agile framework.

Gap Analysis Report

A written report delivered within 48 hours identifying your top three hardening gaps and the specific changes needed to close them.

Prioritized Roadmap

A sequenced list of actions your team can execute in the next two sprints to begin the transition — no long transformation programs.

WHO THIS IS FOR

This session is right for you if:

- ✓ **Your team uses AI coding tools** but hasn't restructured its delivery ceremonies around them.
- ✓ **You're seeing velocity increase** but production confidence isn't keeping pace.
- ✓ **Your Definition of Done** was written before AI-assisted development was part of your workflow.
- ✓ **You want an outside perspective** from a practitioner who has done this before — not a generic Agile coach.

HOW IT WORKS

Simple. No lengthy onboarding. No homework.

Before the session

You share a brief intake form: team size, current tooling, a sample sprint's worth of stories, and your current Definition of Done. 15 minutes of your time.

During the session	A focused 90-minute video call with Jacques Steward. We walk through your ceremonies against the AI-Era Agile framework, surface the gaps live, and prioritize what to fix first.
Within 48 hours	You receive the written Gap Analysis Report and Prioritized Roadmap. Ready to present to your team or leadership.
Optional follow-on	If the assessment reveals deeper structural work, we scope a Sprint Transformation Engagement. No pressure — the assessment is valuable on its own.

INVESTMENT

\$650 flat fee

Includes the 90-minute session, written Gap Analysis Report, and Prioritized Roadmap.

Limited to 4 assessments per month. Book early.

ABOUT JACQUES STEWARD

Jacques Steward is the founder of IdeaRoost and a Software Development Manager with 10+ years of experience leading .NET and Azure development teams through Agile and DevOps transformation. He has worked at the intersection of modern engineering practice and AI-augmented development, and is the author of *Agile After AI* — a framework for restructuring software delivery in the era of AI-assisted development.

IdeaRoost provides fractional engineering leadership and AI-era Agile practice guidance to engineering teams navigating this transition.
